

PERSONA 1: Conflicted Power User (Primary Persona)

Participants

Shreya, Aarya, Krithi, Joel, Nitin, Ayesha, Aashna, Anand, Aarnav, Thaman

1. Identity

Name: Shreya (Representative Student)

Archetype Quote: *"AI helps me a lot, but I'm never sure if I'm using it the right way."*

Photo: College student working on laptop (placeholder)

2. Demographics

- **Age:** 18–22
- **Occupation:** Undergraduate Student
- **Location:** Urban university campus
- **Tech Comfort:** High

3. Goals & Motivations

Primary Goals:

- Complete assignments efficiently
- Understand concepts faster
- Improve academic performance

Motivations:

- Academic pressure and deadlines
- Desire to perform well with less time
- Fear of falling behind peers

4. Frustrations & Pain Points

Current Frustrations:

- Unclear boundary between *help* vs *cheating*
- Fear of over-dependence on AI
- Unsure whether AI answers are fully correct

Workarounds:

- Cross-checking answers with Google or notes
- Editing AI responses to “make it their own”
- Using AI only for understanding, not submission

5. Behaviors & Habits

Key Behaviors:

- Uses AI frequently (daily/weekly)
- Relies on AI especially under time pressure
- Questions AI ethics but still continues usage
- Uses AI as a starting point, not final output

6. Scenario

Shreya has an assignment due in a few hours. She uses AI to understand the topic and generate a draft. While editing it, she pauses—*“Is this too much AI?”* She rewrites parts manually to feel safer, but still submits work partially influenced by AI. She feels relieved, but slightly unsure if she crossed a line.

PERSONA 2: Cautious Professional

Participants

Deva, Rahul, Ananya, Rohan, Vikram, Kavita

1. Identity

Name: Rahul (Software Engineer)

Archetype Quote: *“AI is useful, but I never trust it blindly.”*

2. Demographics

- **Age:** 23–35
- **Occupation:** Working professional (tech/business roles)
- **Location:** Urban workplace
- **Tech Comfort:** High

3. Goals & Motivations

Primary Goals:

- Increase productivity
- Automate repetitive tasks
- Improve efficiency at work

Motivations:

- Career performance and output quality
- Time optimization
- Professional accountability

4. Frustrations & Pain Points

Current Frustrations:

- AI can give incorrect or incomplete outputs
- Concerns about data privacy
- Lack of reliability in critical tasks

Workarounds:

- Verifying outputs manually
- Using AI only for drafts or suggestions
- Avoiding AI for sensitive tasks

5. Behaviors & Habits

Key Behaviors:

- Uses AI regularly but cautiously
- Always double-checks outputs
- Treats AI as assistant, not decision-maker
- Uses AI mostly for productivity, not judgment

6. Scenario

Rahul uses AI to generate a piece of code for a project. Before using it, he carefully reviews and tests every line. He finds small errors and fixes them manually. For him, AI speeds things up—but final responsibility always stays with him

PERSONA 3: High-Stakes Skeptic

Participants

Dr. Neha, Aisha (medical), Sanjeev (teacher)

1. Identity

Name: Dr. Neha

Archetype Quote: *"In my field, I cannot afford to be wrong."*

2. Demographics

- **Age:** 25–50
- **Occupation:** Doctor / Educator
- **Location:** Hospitals / Institutions
- **Tech Comfort:** Medium

3. Goals & Motivations

Primary Goals:

- Maintain accuracy and reliability
- Ensure ethical decision-making
- Deliver safe and correct outcomes

Motivations:

- Responsibility toward others (patients/students)
- Professional ethics
- Avoiding harmful consequences

4. Frustrations & Pain Points

Current Frustrations:

- AI lacks reliability in critical situations
- Ethical concerns about misuse
- Cannot fully trust AI outputs

Workarounds:

- Using AI only for minor tasks
- Relying on personal expertise
- Avoiding AI in high-risk decisions

5. Behaviors & Habits

Key Behaviors:

- Uses AI occasionally

- Avoids AI for core responsibilities
- Relies heavily on human judgment
- Prioritizes accuracy over speed

6. Scenario

Dr. Neha considers using AI to organize patient notes but avoids using it for diagnosis. She double-checks everything manually. Even when AI suggests something useful, she relies on her training before making decisions.

PERSONA 4: Low-Trust Casual User

Participants

Madhu, Amit

1. Identity

Name: Amit

Archetype Quote: *"I use AI sometimes, but I don't really trust it."*

2. Demographics

- **Age:** 30–55
- **Occupation:** General working professional
- **Location:** Urban/semi-urban
- **Tech Comfort:** Medium–Low

3. Goals & Motivations

Primary Goals:

- Get quick information
- Simplify small daily tasks
- Stay updated with technology

Motivations:

- Convenience
- Curiosity about AI
- Ease of use

4. Frustrations & Pain Points

Current Frustrations:

- Lack of trust in AI answers
- Confusion about how AI works
- Fear of misinformation

Workarounds:

- Cross-checking with other sources
- Asking people instead
- Limited usage of AI

5. Behaviors & Habits

Key Behaviors:

- Uses AI occasionally
- Avoids relying on it heavily
- Prefers traditional sources for important tasks
- Engages with AI only for simple use cases

6. Scenario

Amit uses AI to look up general information but doesn't fully trust the response. He cross-checks with Google or asks someone else before believing it. He sees AI as helpful—but not dependable.
