

Survey objective:

To identify the groups and individuals affected by the adoption of artificial intelligence and to understand their characteristics, roles, experiences, and concerns. We aim to gather insights that help us define the personas of those impacted by AI, including how AI influences their work, daily activities, opportunities, and challenges. The findings will be used to categorize affected stakeholders and develop representative user personas for them.

-----

target audience:

People who use or are affected by AI-driven tools or systems in their professional, academic, and/or personal activities

-----

target sample size:

40

-----

questions:

1)On a scale of 1-5 often do you interact with AI tools?

1-Never

2-Rarely

3-Once a month

4-few times a week

5-Daily

2)In which areas do you use or experience AI?(select one or more)

. Work / Professional tasks

. Education / Studying

. Creative activities (writing, art, design, music)

. Personal productivity (planning, organization, etc.)

. Entertainment / Social media

. I do not actively use AI

3)On a scale of 1–5, how much has AI changed the way you complete tasks in your daily life?

1 – Not at all

2 – Slightly

3 – Moderately

4 – Significantly

5 – Extremely

4)What is the main benefit you get from using AI tools?

- . Saves time
- . Improves productivity
- . Helps with learning or understanding concepts
- . Helps generate ideas or creativity
- . Convenience / automation
- . I do not see significant benefits

5)What concerns do you have about AI? (select one or more)

- . Job displacement
- . Accuracy / reliability of information
- . Privacy concerns
- . Over-reliance on AI
- . Ethical issues or misuse
- . I have no major concerns

6)On a scale of 1–5, how much do you rely on AI to complete important tasks?

- 1 – Not at all
- 2 – Slight reliance
- 3 – Moderate reliance
- 4 – High reliance
- 5 – Very high reliance

open ended:

7)Can you describe a situation where AI significantly changed how you performed a task or solved a problem?

open ended:

8)How do you think AI will affect your work, studies, or daily life in the future?

-----

key metrics tracked:

Frequency of usage of AI tools.

Areas most affected by AI, e.g.: productivity, learning etc.

Perceived benefits of AI.

Concerns or negative impacts e.g.: job security, accuracy issues, ethical concerns.

Level of dependence on AI to complete tasks.

Difference in perception while tracking role of the person.

---

How will findings feed into empathy maps or personas?

The survey responses will be grouped based on similarities in AI usage, impact, and attitudes. These groups will help identify different types of users affected by AI. From this, we will create the personas that represent different groups of users.

The data will also help fill empathy map sections such as what users think, feel, say, and do regarding AI, while also characterizing their motivations, concerns, and expectations. This will help us better understand how different people interact with AI and how it influences their behavior.

---

## Revised Survey:

Q1) Do you use AI tools like ChatGPT or others? What do you usually use them for?

Q2) Can you tell me about the last time you used AI for something important?  
Follow up: a situation where AI significantly changed how you did something

Q3) How often do you end up using AI, like daily, occasionally, or only when needed?  
Follow up: Do you feel like you depend on it for important work?

Q4) When you get an answer from AI, do you usually trust it or check it?  
Follow up: why?

Q5) What's the biggest benefit you personally get from using AI?

Q6) Do you have any concerns or worries when using AI?  
(accuracy, privacy, over-reliance, ethics)

Q7) Have you ever felt unsure if using AI in a situation was okay or not?  
If yes: What made you feel that way?  
If no: Where do you think the line is between help and cheating?

Q8) How does using AI make things feel for you: easier, stressful, confusing, risky?

Q9) If you couldn't use AI for a week, what would change for you?

Q10) How do you think AI will affect your work or studies in the future?

Q11) What would help you use AI more responsibly or confidently?  
Alt: Do you ever feel confused about what's okay vs not okay when using AI  
What would make it clearer for you?

(clues: clearer rules, examples, something that tells you when it's okay vs not)

# RESPONSES:

## Charvi

### 1) Interview 1 Transcript : THAMAN 10th grade student

**Interviewer:** Good afternoon. Could you introduce yourself?

**Participant:** Hello, I'm a student studying in 10th grade.

**Interviewer:** Okay, so Thaman, do you use AI tools like ChatGPT or others?

**Participant:** Yes.

**Interviewer:** What do you usually use them for?

**Participant:** To finish my homework.

**Interviewer:** Okay, so educational purposes?

**Participant:** Somewhat.

**Interviewer:** So, do you use them for studying as well, or is it only homework assignments?

**Participant:** I use them for everything, whether it's for studying about a subject or searching for a new shoe to buy, or my future career goals to research on them.

**Interviewer:** Makes sense. Could you tell me the last time you used AI for something really important?

**Participant:** To decide, no, to search for further universities.

**Interviewer:** Universities.

**Participant:** Yeah, search for the course is provided by various universities.

**Interviewer:** Oh, so like, did, is there a situation you recently encountered where AI significantly changed how you did something?

**Participant:** Um, a very slight change, I would say so because now all the AIs are getting very competitive, whether it's Gemini, ChatGPT, or Claude. So companies are really trying to stand out. Now if you, now if you look at Gemini, they're also showing, like, more, more clearer answers, and ChatGPT is also, it's getting a more emotional touch.

**Interviewer:** How often do you end up using AI? Is it daily, occasional, or only when you need it?

**Participant:** Uh, when I need it, or when I'm very bored.

**Interviewer:** Do you feel like you use, you do a lot of important work on AI? Like, depend on AI for lots of important work.

**Participant:** No, if it's, like, highly important, but it's a task which, uh, which requires any sort of researching or making any sort of uh AI-made pictures or searching for pictures and all, I need to get it from there.

**Interviewer:** So, when you get an answer from AI, do you just blindly trust it or do you cross-check it?

**Participant:** So it depends on the, like, the task I'm doing. If it's, if it's a very, uh, like, casual thing, I won't really recheck with any other websites. If it's a school assignment or something really important in my life, I have to, I'll, I'll go through the stuff which I, which I don't understand, or I may, I may also cross-check with other websites.

**Interviewer:** Okay, why do you think cross-checking it is really important?

**Participant:** Uh, because I want the right thing.

**Interviewer:** Does that mean you think AI is prone to making a lot of mistakes?

**Participant:** No, I just wanted to make sure I don't get any wrong answers.

**Interviewer:** Okay, and the other times when you blindly trust the answers AI gives you, why is that?

**Participant:** Because it's considered to be very good.

**Interviewer:** Okay, general consensus.

**Participant:** It has like a huge data in it, so it should be able to answer.

**Interviewer:** Okay, what's the biggest benefit that you personally get from using AI?

**Participant:** I have a lot of time left. So I have a lot of time saved, so I can spend that time on playing and doing something I want to. And not only that, the thing with AI is that it can do stuff which I'm bad at also. Tasks such as making PPTs or finding the right photos. And sometimes it can also get really hard to find a good answer for a question when multiple websites are giving multiple different answers. True. I think AI gives you the right answer, cross-checking with everything. Yeah, okay, has a one right there.

**Interviewer:** So, do you have any concerns or worries when using AI? Maybe the accuracy part of it or the privacy concerns or how over-reliant people have become or even the ethical part of using AI.

**Participant:** Not really. My only concern is that, is the involvement of governments trying to dictate the answers or the data provided by AI and the data they take.

**Interviewer:** True, the recent developments from the US government really have shook most of us.

**Participant:** Not only that, Chinese AI such as DeepSeek are heavily affected by the CCP.

**Interviewer:** Makes sense. Have you ever felt unsure if using AI in a situation was okay or not?

**Participant:** I get concerned using AI when I want to talk about the likes or dislikes of my family members when buying something. So when, let's say I'm buying something, I need to explain to it that my friend or my family member likes this, likes that. I don't really like giving characteristics

or physical characteristics about them, whether it's their name or their face, their height, or my nationality.

**Interviewer:** So then again, it's about privacy here, right?

**Participant:** Yeah.

**Interviewer:** On a more ethical way, did you think, did you ever use AI for cheating in a test or helping you out with an assignment? Did you feel if that situation was okay or not?

**Participant:** No, I think it's okay.

**Interviewer:** So where do you draw the line between help and cheating?

**Participant:** See, I think that in this world, there's no line. It's a 4D world. It's not a 1D world, so there's no line.

**Interviewer:** Okay, okay.

**Participant:** No, but honestly, the line should be not using it during exams.

**Interviewer:** Okay, so we draw the line during exams.

**Participant:** Yeah. Because that's official, and whether it's a homework assignment or a normal test, I don't think it really matters because you can always, like, understand from the AI a lot better.

**Interviewer:** Okay, so...

**Participant:** Yeah, as long as, and also you should, not only just paste it into the AI, you should also understand whatever it paste out.

**Interviewer:** Makes sense. So, how does using AI make things for you? Like, easier, stressful, confusing, risky? Any other thing?

**Participant:** Like, it was made to make life easier.

**Interviewer:** So if you couldn't use AI for a week, how would that situation play out for you?

**Participant:** I won't work for a week.

**Interviewer:** You won't work for a week?

**Participant:** I'll take a vacation.

**Interviewer:** Okay, how do you think AI will affect your work or studies in the future?

**Participant:** I'm pretty sure it's going to be in every single field by the time I enter the professional world.

**Interviewer:** Do you think your future profession is at risk of being taken over by AI? How does that make you feel?

**Participant:** It makes me feel happy and sad. Firstly, I think it is going to take over most of the jobs. But it's also meant to create a lot more jobs. Like, new fields are occurring, but the problem is that the new fields that are created may not be the fields that I want to go into. And the field

that is taking over may be one of them that I want to go into. And the good part about it is that might as well just take over all jobs. I can sit at home and enjoy.

**Interviewer:** Then who's gonna make money?

**Participant:** The concept of money will be removed in the next, like, 50 years.

**Interviewer:** Okay, that's some really wild thoughts. Okay.

**Participant:** No, it is true. It is true. The concept of money will be taken over when there's no more jobs left. That means that everything is being done. And we'll also have a part where... Fine, dude. Okay, so... Oh, I won't understand.

**Interviewer:** Okay. What would... Okay, what would... what would help you use AI more responsibly or confidently? Like, certain rules, examples, or something tells you when it's okay or not to use something about that.

**Participant:** Can you repeat?

**Interviewer:** What would help you use AI more responsibly or confidently? Like, if you've ever felt confused about using AI, about when it's okay and when it's not okay, what would make it clear for you?

**Participant:** If the company policy of the AI makes it very clear that they have no affiliation with the government or any other sort of organizations, powerful organizations, I would be more confident when using the AI, knowing that my information isn't disclosed to anyone. Makes sense. And I would also like to... I would also like to be assured that no employee of the company or the AI isn't also trained again with knowing my experience or knowing my...

**Interviewer:** Using your data.

**Participant:** Yeah, data.

**Interviewer:** Okay, it's been wonderful. Thank you, Taman.

**Participant:** You're welcome

## 2) Interview 2 Transcript - DEVA software engineer at microsoft

**Interviewer:** Hello, could you introduce yourself?

**Participant:** Hello, my name is Deva. I'm working as a software engineer.

**Interviewer:** Okay, so this is a short survey for our design thinking course. So do I have your permission to record this call?

**Participant:** Yes, please. Please go ahead.

**Interviewer:** Yeah, so first question, do you use AI tools like ChatGPT or others?

**Participant:** Yes, I do.

**Interviewer:** What do you usually use them for?

**Participant:** So I use them for writing my emails, planning my calendar, and do some analysis,

be it stock market, to understanding various concepts, to basically get solutions in both SAP and other IT solutions.

**Interviewer:** Okay, so can you tell me about the last time you used AI for something really important?

**Participant:** Yes, so if I recall, I used AI to understand various courses that are offered in India by foreign universities.

**Interviewer:** Oh, like, was there a situation you encountered where AI significantly changed how you do something?

**Participant:** Yes, it does. Yes, it did. So otherwise, what I used to do was I used to browse through various websites to understand various courses that are offered in various streams. But using AI, I was able to get a consolidated summary of all the courses and institutions that are available in India. In fact, it was a quick glance. It really helped me.

**Interviewer:** True, it's really good at summarizing stuff. How often do you end up using AI? Like daily, occasionally, or only when it's needed?

**Participant:** It's daily.

**Interviewer:** It's daily? Do you feel like you depend on it a little too much for important work?

**Participant:** Yes, yes, I do. And in most of the cases, the very first thing that I reach out to is AI.

**Interviewer:** Do you feel when you get these answers from AI, do you usually just blindly trust it or do you cross-check the answers or something like that?

**Participant:** No, for sure, I'm going to cross-check the outcome. I'm sure, yeah.

**Interviewer:** How do you usually cross-check answers?

**Participant:** So, what I do is, I'll just take the example of proofreading my emails, right? So, yes, I do use AI to prepare the text for my emails, but for sure I'm going to proofread the text and then send it.

**Interviewer:** But why do you think it's necessary for you to recheck it?

**Participant:** Because it all depends on the context or the feed that these AI tools get. So, in certain cases, it might be assumed certain things, right? So, which could be different to my scenario or my context. So, that is the reason I feel we are supposed to be validating the outcome and then make use of it.

**Interviewer:** Makes sense. So, what's the biggest benefit you personally get from using AI?

**Participant:** So, I would say, previously, before AI, I used to spend around 70-80% of the time in non-value-added activities, something like drafting an email or browsing through various websites for the same set of information. But now, fortunately, AI is doing this job, at least completing those 70-80% of the repetitive or tedious tasks so that I could focus more on strategy than on the operational tasks.

**Interviewer:** Yeah, makes sense. So, on the other side of the table, do you have any other concerns or worries when using AI, like when it comes to its accuracy, privacy concerns, your over-reliance on it, or even the ethical concept of AI?

**Participant:** Yes, I do have concerns on AI usage. As you said, accuracy, yes, as we discussed before, context is more important and the feed that we key in to AI and ML tools is more important and accuracy depends on the kind of feed that it gets. So I'm concerned about AI understanding my context, point one. Privacy, yes, I do worry about it as I'm not really sure all the data that I key in or I input is not used elsewhere. It could be even my financial data, right? I sometimes tend to rely on AI to do some financial planning, but at the same time I'm worried about my details being shared to others. So that is on privacy. Ethics, yes, and even overreliance. So maybe these days I am relying on it more than it used to be.

**Interviewer:** So have you ever felt unsure if using AI in a situation was okay or not?

**Participant:** So yes, in certain cases, especially if there is a topic about faith, trust, or believing in a religion, right? So there are certain sensitive topics which I would say I'm not really sure that AI can provide me the required context or can get me a proper response to it.

**Interviewer:** Oh, okay, that makes sense too. I was thinking about it in a rather ethical way where, you know how students these days are using a lot of AI with their assignments, tests, and everything like that. So where do you think the line between helping and cheating is while using AI, especially for students?

**Participant:** Yes, yes, I do agree with you on this. So yes, so if you already have the context and you did not want to spend time on repetitive tasks, it falls under helping someone, right? But if someone is trying to cheat or say without even understanding the lesson, someone wants to just complete the homework or the assignment, that falls under cheating because the student did not put in efforts to understand the concepts or basically trying to come up with a shortcut there. That falls under cheating.

**Interviewer:** That makes sense. How does using AI make things feel for you? Like, is it easier, stressful, confusing, or risky? I mean, at least at your job, I believe it's...

**Participant:** Yep, yep. In my day-to-day tasks, I feel it is easier, but when it comes to health or finance, it is a bit stressful. Risky, I would say.

**Interviewer:** Yeah. If you couldn't use AI for a week, what would change for you?

**Participant:** Yes, I might end up doing all those tedious tasks by myself, like drafting something for more than an hour or preparing a tech with all the routine content, right? Yeah, it could be so. Or preparing a template, wasting time on preparing a template. So these things, I might end up spending more time in such operational tasks as...

**Interviewer:** And emotionally also, you probably would have withdrawal symptoms from your over-dependency on AI.

**Participant:** Yeah, yeah.

**Interviewer:** How do you think AI will affect your work or studies in the future?

**Participant:** For sure, I'm very, very positive about it because it doesn't need me to refer several books or several articles or several sources. Instead, it does a great job in terms of summarizing all the content or pulling in all the relevant content from various resources. So that is the best thing that I love about AI. And for sure, once it is done, I would be able to spend more time on... I would be able to spend time in understanding more concepts. So basically, I could be more productive in my work.

**Interviewer:** A little controversial take on this is, do you believe AI will replace you, at least in your job or your workspace?

**Participant:** If I end up doing some repetitive tasks and all those menial tasks, yes, AI would definitely replace me. But for sure, if I want to leverage these capabilities and think about or focus on all those A-class items, I'm sure I would end up leveraging AI and it is not otherwise.

**Interviewer:** That's nice. What would help you use AI more responsibly or confidently?

**Participant:** So, yes, one is, yes, being myself, I should be utilizing AI to enable or increase my productivity. That is one. And I will be confident if there are some checks and balances in the system saying, let's say if something, if a chat is confidential, right, it shouldn't be shared or it should not even be used to feed in the machines, something like it should not be used for machine learning.

**Interviewer:** Training purposes.

**Participant:** Otherwise, yeah, otherwise these things will be copied or shared with others. Not get field data being leaked.

**Interviewer:** Yeah, yeah. Thank you. Thank you for the interview.

**Participant:** Thank you.

### 3) Interview 3 Transcript - Dr NEHA dentist

**Interviewer:** Good morning, Dr. Neha.

**Participant:** Hi, Charvi.

**Interviewer:** So this is a small interview survey thing we're taking for our course, Design Thinking. So do I have your permission to record this?

**Participant:** Yeah, sure.

**Interviewer:** Okay, so do you use AI tools like ChatGPT or others?

**Participant:** Yeah, I do.

**Interviewer:** What do you usually use them for?

**Participant:** I mostly use it for general information, drafting messages, or sometimes for organizing content or learning about like non-important things.

**Interviewer:** Can you tell me about the last time you used AI for something really important?

**Participant:** Well, I wouldn't call it that important, but I used it to organize like my patient material. It helped me organize all of the materials and keep it in a place and all that.

**Interviewer:** Oh, wow. How often do you end up using AI? Is it like a daily thing, occasional, or is it only when you need it?

**Participant:** It's pretty occasional. I don't depend on it for core clinical work. In healthcare, accuracy matters too much to rely on AI without proper verification.

**Interviewer:** Makes sense. When you get an answer from AI, do you usually trust it or do you cross-check it usually?

**Participant:** I always check it. AI can sound convincing even when it is completely wrong. In medicine or like dentistry, even a small mistake can mislead a patient, so verification is like necessary.

**Interviewer:** Oh, true. What's the biggest benefit you personally get from using AI?

**Participant:** I think it would be saving time because I could probably do the same thing in like a few hours, but I could do that in like a few minutes with AI.

**Interviewer:** Yeah, true. It's really helpful. Do you have any concerns or worries while using AI, like maybe accuracy concerns, privacy concerns, or concerns over over-reliance, or even ethics?

**Participant:** Yes, definitely. Accuracy is the biggest concern. Privacy is another major issue, especially if patient-related information is involved. I'm also concerned that some people may trust AI too much without understanding it.

**Interviewer:** Oh yeah, yes, that's a very big debate that's going on recently. Have you ever felt unsure if using AI in a situation was okay or not?

**Participant:** Yes, the line gets very clear in healthcare. AI can support communication or learning, but it should not replace professional judgment or diagnosis.

**Interviewer:** Oh, okay. So, how does using AI make you feel? Does it make things easy for you, stressful, confusing, or risky?

**Participant:** It's helpful in most situations, but also, like, risky. So, it's... It's a balance, right? We just strike... It's really important we strike this balance.

**Interviewer:** So, if you couldn't use AI for a week, what would change for you?

**Participant:** Not much in terms of patient care, but maybe, like, the organization, like, organizing.

**Interviewer:** True, true, true. Makes sense. I feel like this profession is a little less dependent on this field, personally. So, how do you think AI will affect your work or studies in the future?

**Participant:** I think AI will become a useful support tool in healthcare, especially for documentation or education and efficiency, but strong rules and ethical guidelines are important to protect privacy.

**Interviewer:** Yeah. Makes sense. Like, unlike many professions, at least a profession in medical field is harder to replace by AI.

**Participant:** Yeah.

**Interviewer:** Right? And I feel like at least... Because you always need someone to keep it in check.

**Participant:** True, true.

**Interviewer:** So, I feel like your job is safer compared to all of these software engineers.

**Participant:** True, true.

**Interviewer:** So, what do you think would make you use AI more responsibly or confidently?

**Participant:** Strong rules and ethical guidelines and privacy protections are, like, necessary. Definitely, especially when it comes to patients' health and personal details. I believe it's, like, something really important.

**Interviewer:** Yeah. Thank you.

**Participant:** You're welcome

#### 4) Interview 4 Transcript - shreya, university student

**Interviewer:** Hello, could you introduce yourself?

**Participant:** Hi, I'm shreya. I'm a university student, currently in my second year.

**Interviewer:** Okay, so this is a short survey for our design thinking course. Do I have your permission to record this?

**Participant:** Yeah, that's fine.

**Interviewer:** Do you use AI tools like ChatGPT or others?

**Participant:** Yeah, I do.

**Interviewer:** What do you usually use them for?

**Participant:** Mostly for assignments, coding help, understanding concepts, and sometimes for like random stuff also.

**Interviewer:** Can you tell me about the last time you used AI for something really important?

**Participant:** Yeah, I used it during my intern application process, like to fix my resume and also prepare for interviews.

**Interviewer:** Was there a situation where AI significantly changed how you did something?

**Participant:** Yeah, definitely. Earlier I used to search everything on Google and open like 10 tabs, but now I just ask AI and it gives everything in one place.

**Interviewer:** How often do you use AI?

**Participant:** Almost daily.

**Interviewer:** Do you feel like you depend on it a lot?

**Participant:** Yeah, a little too much sometimes.

**Interviewer:** When you get answers from AI, do you trust it or cross-check it?

**Participant:** Depends. If it's something important, I cross-check. Otherwise, I just go with it.

**Interviewer:** Why do you think cross-checking is important?

**Participant:** Because sometimes it gives wrong answers confidently, so I don't want to risk it.

**Interviewer:** What's the biggest benefit you get from using AI?

**Participant:** It saves a lot of time and also explains things in a simpler way than textbooks.

**Interviewer:** Do you have any concerns while using AI?

**Participant:** Yeah, like overusing it and becoming too dependent, and also sometimes I feel like I'm not actually learning properly.

**Interviewer:** Have you ever felt unsure if using AI was okay or not?

**Participant:** Yeah, especially during assignments, like whether it's helping or cheating.

**Interviewer:** So where do you draw the line between help and cheating?

**Participant:** I think if you're just copying answers without understanding, that's cheating. But if you're using it to learn, then it's fine.

**Interviewer:** How does using AI make things feel for you?

**Participant:** Easier, but also sometimes I feel lazy because of it.

**Interviewer:** If you couldn't use AI for a week, what would happen?

**Participant:** I would struggle a bit, especially with assignments and coding.

**Interviewer:** How do you think AI will affect your future?

**Participant:** I think it will be very important in my career, like almost every field will use AI.

**Interviewer:** Do you think AI will replace your job?

**Participant:** Maybe some parts of it, but I think people who know how to use AI will be fine.

**Interviewer:** What would help you use AI more responsibly?

**Participant:** Maybe clear guidelines from college about when it's okay to use AI and when it's not.

**Interviewer:** Thank you.

**Participant:** Yeah, thank you.

## 5) Interview 5 Transcript - Madhu, retired

**Interviewer:** Hello, could you introduce yourself?

**Participant:** Hello, I'm retired now, I used to work in a government office.

**Interviewer:** This is a short survey for our design thinking course. Do I have your permission to record this?

**Participant:** Yes, yes, you can record.

**Interviewer:** Do you use AI tools like ChatGPT or others?

**Participant:** Sometimes, not very regularly.

**Interviewer:** What do you usually use them for?

**Participant:** Mostly for getting information, like general knowledge or sometimes for health-related doubts.

**Interviewer:** Can you tell me about the last time you used AI for something important?

**Participant:** I used it to understand some medical reports and medicines.

**Interviewer:** Was there a situation where AI changed how you did something?

**Participant:** Earlier I used to ask people or go to doctors directly, but now I first check online or through AI to understand a little.

**Interviewer:** How often do you use AI?

**Participant:** Only when needed.

**Interviewer:** Do you depend on it for important work?

**Participant:** No, I don't depend on it fully.

**Interviewer:** When you get answers from AI, do you trust it or cross-check it?

**Participant:** I usually cross-check or ask someone else also.

**Interviewer:** Why do you feel the need to cross-check?

**Participant:** Because I am not sure if it is always correct.

**Interviewer:** What's the biggest benefit you get from using AI?

**Participant:** It gives quick answers and helps me understand things without much effort.

**Interviewer:** Do you have any concerns while using AI?

**Participant:** Yes, like wrong information and also privacy, I don't like giving too many personal details.

**Interviewer:** Have you ever felt unsure about using AI?

**Participant:** Yes, especially for health matters, I feel it's better to consult a doctor.

**Interviewer:** How does using AI make things feel for you?

**Participant:** It is helpful but sometimes confusing also.

**Interviewer:** If you couldn't use AI for a week, what would happen?

**Participant:** Nothing much, I can manage without it.

**Interviewer:** How do you think AI will affect the future?

**Participant:** It will help people, but also people may become too dependent on it.

**Interviewer:** Do you think AI will replace jobs?

**Participant:** Maybe some jobs, but not everything.

**Interviewer:** What would help you use AI more confidently?

**Participant:** If it is more trustworthy and if there are clear rules about data safety.

**Interviewer:** Thank you.

**Participant:** Okay, thank you.

## Mohana

### 1) Aarya, 17, Class 12 student

**Interviewer:** Hi Aarya. Do you use AI tools like ChatGPT or others? What do you usually use them for?

**Aarya:** Yes, I do. Mostly for studying. I use AI to simplify difficult chapters, make quick summaries, practice interview or viva questions, and sometimes to improve my writing.

**Interviewer:** Can you tell me about the last time you used AI for something important?

**Aarya:** Last week, before a physics test. I was stuck on one concept, so I asked AI to explain it in simpler steps. It actually changed how I studied because instead of rereading the same textbook page again and again, I could ask follow-up questions until I understood it.

**Interviewer:** How often do you use it? Do you depend on it for important work?

**Aarya:** I use it almost daily, but I would not say I fully depend on it. It helps me start faster, but for actual schoolwork I still need my own notes and teacher's explanation.

**Interviewer:** When AI gives you an answer, do you trust it or check it? Why?

**Aarya:** I check it, especially for facts, formulas, and definitions. Sometimes the explanation sounds confident even when it is slightly wrong.

**Interviewer:** What is the biggest benefit for you?

**Aarya:** Saving time and reducing stress. It feels like having a tutor available anytime.

**Interviewer:** Any concerns?

**Aarya:** Yes, over-reliance. I worry students may stop thinking for themselves. Privacy is another concern.

**Interviewer:** Have you ever felt unsure whether using AI was okay or not?

**Aarya:** Yes, especially for assignments. For me, using it to understand is fine, but copying answers is cheating.

**Interviewer:** How does it make things feel for you? And what if you could not use it for a week?

**Aarya:** Mostly easier, sometimes confusing when answers differ. Without it, studying would feel slower.

**Interviewer:** How do you think AI will affect your studies in the future, and what would help you use it more responsibly?

**Aarya:** I think it will become a normal study tool. Clear school rules and examples of what counts as help versus cheating would help a lot.

## 2) Aarnav, 21, undergraduate engineering student

**Interviewer:** Do you use AI tools? What for?

**Aarnav:** Yes, pretty often. I use them for coding help, debugging, brainstorming project ideas, summarizing articles, and sometimes for drafting presentations.

**Interviewer:** Tell me about the last important time you used AI.

**Aarnav:** Recently for a lab project. I used AI to understand how to structure the code and compare different approaches. It did not do the project for me, but it helped me move faster and think more clearly.

**Interviewer:** How often do you use AI, and do you depend on it?

**Aarnav:** I use it daily. For important work, I depend on it as an assistant, not as the final authority. I still test everything myself.

**Interviewer:** Do you trust AI answers?

**Aarnav:** Only partly. For technical work, I always verify. AI is useful for direction, but it can make up code, references, or explanations.

**Interviewer:** Biggest personal benefit?

**Aarnav:** Speed. It reduces the time needed to get unstuck. Also, it helps me ask better questions.

**Interviewer:** Concerns or worries?

**Aarnav:** Accuracy, definitely. Also academic misuse. A lot of students can start relying on AI-generated work without building actual understanding.

**Interviewer:** Have you ever felt unsure whether using AI was okay?

**Aarnav:** Yes, especially when the line between guidance and doing the work becomes blurry. My view is that if AI is helping you learn and you are still making the real decisions, it is fine. If you submit AI output as your own thinking, that is not fine.

**Interviewer:** How does using AI feel?

**Aarnav:** Mostly easier and efficient, but sometimes risky because you can become overconfident.

**Interviewer:** What would change if you could not use AI for a week?

**Aarnav:** I would still manage, but debugging and research would take longer.

**Interviewer:** Future impact and what would help?

**Aarnav:** AI will become part of engineering workflows. Better university guidelines and more awareness about responsible use would help.

### 3) Rahul, 29, marketing professional

**Interviewer:** Rahul, do you use AI tools like ChatGPT or others?

**Rahul:** Yes. I mainly use them for drafting emails, content ideas, presentation outlines, and summarizing reports.

**Interviewer:** What was the last important thing you used AI for?

**Rahul:** I used it for a client pitch. I had a rough idea but needed structure quickly. AI helped organize the key points and gave me alternate wording. It changed my workflow because I now spend less time starting from a blank page.

**Interviewer:** How often do you use it?

**Rahul:** A few times a week, sometimes daily during busy periods. I would say I rely on it for speed, but not for final judgment.

**Interviewer:** When AI gives you an answer, do you trust it?

**Rahul:** Not completely. For creative work, it is fine as a starting point. For numbers, facts, or strategy, I check carefully because wrong information can create real problems at work.

**Interviewer:** Biggest benefit?

**Rahul:** Productivity. It cuts down repetitive work and helps me think of options faster.

**Interviewer:** Any concerns?

**Rahul:** Yes. Privacy is a major one because in office work you cannot just paste sensitive company information into any tool. I am also concerned that people may start sounding generic if they depend too much on AI writing.

**Interviewer:** Have you ever felt unsure if using AI was okay?

**Rahul:** Yes, especially in professional settings. For me, using AI for drafting is acceptable, but using it to fake expertise or submit unchecked work is not.

**Interviewer:** How does it make things feel?

**Rahul:** Easier overall, but also slightly risky because it can give polished nonsense.

**Interviewer:** If you could not use AI for a week, what would change?

**Rahul:** My work would be slower, especially brainstorming and drafting.

**Interviewer:** How will AI affect your future work, and what would help you use it responsibly?

**Rahul:** It will become standard in marketing. Clear workplace policies and training on safe use would make things much clearer

#### 4) Sanjeev, 44, school teacher

**Interviewer:** Sanjeev sir, do you use AI tools? If yes, what for?

**Sanjeev:** Yes, but moderately. I use AI mostly for lesson planning, simplifying topics, and generating practice questions for students.

**Interviewer:** Can you describe the last time you used it for something important?

**Sanjeev:** I used it to prepare a classroom activity for mixed-level students. It gave me multiple versions of the same concept, which was helpful. It changed how I prepare because I can now create material faster, but I still modify everything myself.

**Interviewer:** How often do you use AI?

**Sanjeev:** Occasionally, mainly when needed. I do not depend on it, but it is useful support.

**Interviewer:** Do you trust AI answers or do you check them?

**Sanjeev:** I always check. As a teacher, I cannot risk passing incorrect information to students. Sometimes AI simplifies too much or gives an incomplete answer.

**Interviewer:** What is the biggest benefit for you?

**Sanjeev:** It saves preparation time and helps me look at a topic from different angles.

**Interviewer:** Do you have concerns?

**Sanjeev:** Quite a few. Accuracy is one. Another is that students may use AI to avoid genuine effort. I am also concerned about ethics and whether students understand when AI support becomes academic dishonesty.

**Interviewer:** Have you felt unsure about whether using AI was okay?

**Sanjeev:** Yes, especially in education. I think the line is simple: AI can support learning, but it should not replace thinking, analysis, or original work that students are expected to do themselves.

**Interviewer:** How does using AI make things feel?

**Sanjeev:** Easier, but sometimes confusing because it is not always clear how much to trust.

**Interviewer:** If you could not use AI for a week?

**Sanjeev:** It would not stop my work, but planning would take longer.

**Interviewer:** How do you see AI affecting work or studies in the future? What would help?

**Sanjeev:** It will definitely become common in education. What is needed most is clearer institutional guidance and real examples of acceptable versus unacceptable use.

## 5) Amit, 61, retired bank officer

**Interviewer:** Amit ji, do you use AI tools like ChatGPT?

**Amit:** Yes, though not as much as younger people. I use them mainly for general information, drafting messages, translating things, and understanding new topics in simple language.

**Interviewer:** Can you tell me about the last time you used AI for something important?

**Amit:** I recently used it to help draft a formal message and understand some health insurance terms. It was useful because it explained things more clearly than many websites.

**Interviewer:** How often do you use AI? Do you depend on it?

**Amit:** Only when needed. I would not say I depend on it, but I do find it convenient.

**Interviewer:** When you get an answer from AI, do you trust it or check it?

**Amit:** I usually cross-check important things. For casual use I may accept it, but for finance, health, or legal matters I definitely verify. At my age, I am careful with such tools.

**Interviewer:** What is the biggest benefit you personally get?

**Amit:** Accessibility. It helps me understand things quickly without searching too much.

**Interviewer:** Any concerns or worries?

**Amit:** Yes, privacy and misinformation. Some people may trust it too easily, especially if the language sounds convincing.

**Interviewer:** Have you ever felt unsure whether using AI was okay or not?

**Amit:** Not exactly for myself, but I do wonder about younger people using it in exams or office work. The line, in my opinion, is whether it is assisting you or replacing your responsibility.

**Interviewer:** How does using AI feel for you?

**Amit:** Mostly easier, though sometimes confusing because different tools say different things.

**Interviewer:** If you could not use AI for a week, what would change?

**Amit:** Not a major disruption, but I would spend more time searching and comparing information.

**Interviewer:** How do you think AI will affect work or studies in the future, and what would help people use it responsibly?

**Amit:** It will become part of normal life. People need clearer rules, digital literacy, and stronger awareness that AI is a tool, not always the truth.

## Karthik

### 1. Krithi - BTECH 2nd yr.

**Interviewer:** Do you use AI tools like ChatGPT or others? What do you usually use them for?

**Krithi:** Yeah, I use ChatGPT mostly. I use it for homework, like understanding concepts, and sometimes for coding help or summarizing notes before exams.

**Interviewer:** Can you tell me about the last time you used AI for something important?

**Krithi:** Yeah, for my physics test. I didn't understand a topic, so I asked AI to explain it in simple terms. It actually helped me get it way faster than my textbook.

**Interviewer:** How often do you use AI? Do you feel like you depend on it?

**Krithi:** I use it almost daily. I wouldn't say I fully depend on it, but yeah, it's kinda become my go-to for studying.

**Interviewer:** When you get an answer from AI, do you trust it or check it?

**Krithi:** I usually trust it, but if it's something important, like formulas or definitions, I double-check with my notes or Google.

**Interviewer:** What's the biggest benefit you get from using AI?

**Krithi:** It saves time and explains things in a way that actually makes sense.

**Interviewer:** Any concerns when using AI?

**Krithi:** Yeah, sometimes I feel like I might rely on it too much or not learn properly.

**Interviewer:** Have you ever felt unsure if using AI was okay?

**Krithi:** Yeah, especially for assignments. Like I don't know where the line is between getting help and cheating.

**Interviewer:** How does using AI make things feel for you?

**Krithi:** Mostly easier, but sometimes I overthink if I'm using it too much.

**Interviewer:** If you couldn't use AI for a week, what would change?

**Krithi:** Studying would take longer for sure, and I'd probably struggle more with tough topics.

**Interviewer:** How do you think AI will affect your future studies?

**Krithi:** I think it'll become a normal tool, like calculators. Everyone will use it.

**Interviewer:** What would help you use AI more responsibly?

**Krithi:** Clear rules from school about what's allowed and what's not.

## 2. Ananya - Works at PEPSICO, HR

**Interviewer:** Do you use AI tools like ChatGPT or others? What for?

**Ananya:** Yes, I use AI tools for work mainly—writing emails, and sometimes analyzing information quickly.

**Interviewer:** Tell me about the last time you used AI for something important.

**Ananya:** I used it to draft a project proposal. It helped structure my ideas and saved me a lot of time.

**Interviewer:** How often do you use AI? Do you depend on it?

**Ananya:** Almost every day. I wouldn't say I depend on it entirely, but it definitely improves my productivity.

**Interviewer:** Do you trust AI answers or verify them?

**Ananya:** I always verify, especially for work-related tasks. AI can be helpful, but it's not always accurate.

**Interviewer:** Biggest benefit?

**Ananya:** Efficiency. It reduces the time spent on routine tasks.

**Interviewer:** Any concerns?

**Ananya:** Yes—accuracy and data privacy. I'm careful about what information I input.

**Interviewer:** Ever felt unsure about using AI?

**Ananya:** Yes, particularly in professional settings. I try to ensure I'm still contributing original work.

**Interviewer:** How does using AI feel?

**Ananya:** It makes things easier, but sometimes I worry about over-reliance.

**Interviewer:** If you couldn't use AI for a week?

**Ananya:** My workflow would slow down significantly.

**Interviewer:** How will AI affect your future work?

**Ananya:** It will likely become an essential tool across industries.

**Interviewer:** What would help responsible use?

**Ananya:** Clear workplace guidelines and better awareness about ethical use.

## Pushpashree

## Lalith

### 1) Anand, 19, undergraduate engineering student

**Interviewer:** Hi Anand. Do you use AI tools like ChatGPT or others? What do you usually use them for?

**Anand:** Yes, all the time. Mostly for coding. Like if I'm stuck on a React project or a C++ error. I also use it when my Linux setup breaks, since I use Arch and Hyprland.

**Interviewer:** Can you tell me about the last time you used AI for something important?

**Anand:** A few days ago. I was doing dynamic programming problems on Codeforces and got stuck. I asked AI to explain the logic, not give the code. It helped me actually understand the math instead of just staring at the solution for hours.

**Interviewer:** How often do you end up using AI, like daily, occasionally, or only when needed?

**Anand:** Daily, for sure. I don't rely on it to do my work, but I use it like a fast search engine. I write the main logic myself.

**Interviewer:** When you get an answer from AI, do you usually trust it or check it?

**Anand:** I always check it. AI often makes up fake code or libraries that crash when you try to run them.

**Interviewer:** What's the biggest benefit you personally get from using AI?

**Anand:** The speed. It saves me so much time when I am stuck on small errors.

**Interviewer:** Do you have any concerns or worries when using AI?

**Anand:** Relying on it too much. I see classmates using it to solve coding problems without reading the questions. You lose your skills that way.

**Interviewer:** Have you ever felt unsure if using AI in a situation was okay or not?

**Anand:** Yes, for college assignments. For me, the line is about understanding. Using it to learn an algorithm is fine. Asking it to write the whole code to submit is cheating.

**Interviewer:** How does using AI make things feel for you?

**Anand:** Mostly easier. But it is risky if I get lazy and forget to check its answers.

**Interviewer:** If you couldn't use AI for a week, what would change for you?

**Anand:** I would spend hours reading forums. My projects would go much slower.

**Interviewer:** How do you think AI will affect your work or studies in the future, and what would help you use it more responsibly?

**Anand:** It will be a standard tool, like a code editor. To help us, colleges need clear rules on what is okay and what is cheating. Right now, it is confusing.

## 2) Priya, 24, junior graphic designer

**Interviewer:** Hi Priya. Do you use AI tools like ChatGPT or others? What do you usually use them for?

**Priya:** I do, yes. I use ChatGPT for campaign ideas or short Instagram captions. I also use Midjourney to make quick mood boards for clients.

**Interviewer:** Can you tell me about the last time you used AI for something important?

**Priya:** Last week, I was pitching a cafe rebrand. Instead of hunting for stock photos, I generated a few quick images to show the vibe. It saved a lot of time and let me show my ideas instantly.

**Interviewer:** How often do you end up using AI? Do you feel like you depend on it?

**Priya:** A few times a week. I don't depend on it for final designs, but it helps me get past creative blocks.

**Interviewer:** When you get an answer from AI, do you usually trust it or check it?

**Priya:** I never fully trust it. The text sounds robotic, so I have to rewrite it. AI images also have weird glitches, so I only use them for reference.

**Interviewer:** What's the biggest benefit you personally get?

**Priya:** It beats the "blank page" feeling. It gives me a quick starting point.

**Interviewer:** Do you have any concerns or worries when using AI?

**Priya:** Copyright ethics bother me. AI models are trained on artists' work without permission. I also worry about losing entry-level jobs.

**Interviewer:** Have you ever felt unsure if using AI in a situation was okay or not?

**Priya:** Yes, especially when adding AI elements into a final client file. I think AI can be for inspiration, but the actual design work must be mine.

**Interviewer:** How does using AI make things feel for you?

**Priya:** Exciting, but also a little stressful because the industry is changing so fast.

**Interviewer:** If you couldn't use AI for a week, what would change for you?

**Priya:** Brainstorming would take much longer. I would have to rely on my own sketches and Pinterest again.

**Interviewer:** How do you think AI will affect your work in the future, and what would help you use it responsibly?

**Priya:** It will automate boring tasks like resizing images. Having clear legal rules on copyright would make it much easier to use safely.

### 3) Vikram, 35, e-commerce business owner

**Interviewer:** Vikram, do you use AI tools? What do you usually use them for?

**Vikram:** Yes. As a business owner, I use it to write product descriptions, draft polite emails to customers, and summarize long contracts.

**Interviewer:** Can you tell me about the last time you used AI for something important?

**Vikram:** Last month, we got a lot of bad reviews for a product. I put them into ChatGPT and asked for the main problem. It told me our sizing chart was confusing. It gave me quick answers without me reading 200 reviews.

**Interviewer:** How often do you end up using AI? Do you depend on it?

**Vikram:** Every single day. I depend on it like a virtual assistant to save time on admin work.

**Interviewer:** When you get an answer from AI, do you usually trust it or check it?

**Vikram:** I check it, especially for tone. Sometimes it sounds too dramatic or fake. I also always double-check any math it does.

**Interviewer:** What's the biggest benefit you personally get?

**Vikram:** Saving time. It saves me hours and lets me do the work of two people.

**Interviewer:** Do you have any concerns or worries when using AI?

**Vikram:** Privacy is my main worry. I have to be very careful not to upload customer data or addresses by mistake.

**Interviewer:** Have you ever felt unsure if using AI in a situation was okay or not?

**Vikram:** Sometimes it feels impersonal to use AI to reply to angry customers. But the line for me is efficiency. I use it to write nicely, but the actual solution I offer is mine.

**Interviewer:** How does using AI make things feel for you?

**Vikram:** So much easier. It takes a lot of stress out of running the business daily.

**Interviewer:** If you couldn't use AI for a week, what would change for you?

**Vikram:** I would be buried in emails. My work would slow down a lot.

**Interviewer:** How do you think AI will affect your work in the future, and what would make it clearer for you?

**Vikram:** It is going to take over basic customer support. Having clear privacy controls inside these AI tools would make me feel safer using them.

#### 4) Aisha, 28, medical resident

**Interviewer:** Hi Aisha. Do you use AI tools like ChatGPT or others? **Aisha:** Yes, but mostly for studying and admin work. I use it to summarize long medical papers, organize notes, or draft polite emails to doctors.

**Interviewer:** Can you tell me about the last time you used AI for something important? **Aisha:** I recently had to present a paper with complex statistics. I asked the AI to explain it to me simply. It helped me truly understand the math so I could present it well.

**Interviewer:** How often do you end up using AI? **Aisha:** Occasionally, maybe twice a week. I do not depend on it for critical hospital work.

**Interviewer:** When you get an answer, do you usually trust it or check it? **Aisha:** I never trust it. In medicine, wrong info is dangerous. AI often makes up fake sources or wrong dosages. I check every medical claim it makes.

**Interviewer:** What's the biggest benefit you personally get? **Aisha:** Saving time. Residency is tiring, so saving 20 minutes on reading a paper is great.

**Interviewer:** Do you have any concerns or worries? **Aisha:** Accuracy and patient privacy. You cannot put patient details into public AI tools. It is illegal and unethical.

**Interviewer:** Have you ever felt unsure if using AI in a situation was okay or not? **Aisha:** The line is clear to me. Using it to study or write emails is fine. Using it to diagnose a patient or write clinical notes is an absolute no.

**Interviewer:** How does using AI make things feel for you? **Aisha:** It is convenient, but you have to be very careful. You cannot turn your brain off.

**Interviewer:** If you couldn't use AI for a week, what would change? **Aisha:** I would just read the papers the long way. It would not really stop my daily job.

**Interviewer:** How do you think AI will affect your field in the future? **Aisha:** Secure, specialized AI will eventually help us with hospital records. But hospitals need to provide safe, private AI tools before we can use them freely.

## 5) Kavita, 52, freelance writer and editor

**Interviewer:** Kavita, do you use AI tools like ChatGPT? What do you use them for?

**Kavita:** Yes. I mostly use it to generate interview questions, make outlines, or check grammar on long drafts.

**Interviewer:** Can you tell me about the last time you used AI for something important?

**Kavita:** I had to write a long article on a new topic. I used AI to make an outline. It saved me hours of planning, so I could jump straight into writing.

**Interviewer:** How often do you end up using AI? Do you feel like you depend on it?

**Kavita:** Almost daily, but only as a helper. I depend on it for the boring work so I can focus on the creative writing.

**Interviewer:** When you get an answer from AI, do you usually trust it or check it?

**Kavita:** I check everything. AI is bad at facts and context. I treat it like a confident but clueless intern. You must check its work.

**Interviewer:** What's the biggest benefit you get from using it?

**Kavita:** Organization. It helps turn my messy ideas into a clear structure.

**Interviewer:** Do you have any concerns or worries when using AI?

**Kavita:** The internet is filling up with bad AI content. I worry clients will start preferring cheap AI text over good human writing.

**Interviewer:** Have you ever felt unsure if using AI in a situation was okay or not?

**Kavita:** Yes, especially as an editor. If a client pays for my writing style, using AI to write the paragraphs is wrong. AI can make the outline, but I must do the writing.

**Interviewer:** How does using AI make things feel for you?

**Kavita:** Mostly helpful. But it is frustrating when clients expect me to work faster just because AI exists.

**Interviewer:** If you couldn't use AI for a week, what would change for you?

**Kavita:** Staring at a blank page would be harder, but the final quality of my work would be the same. It would just take longer.

**Interviewer:** How do you think AI will affect your work in the future, and what would help you use it more responsibly?

**Kavita:** It will take over basic SEO writing, leaving humans to do the creative work. Clear rules from publishers on when AI is allowed would help everyone.

## Gurpreet

### 1. Ravi (19, Undergraduate Engineering Student)

**Interviewer:** Do you use AI tools like ChatGPT or others? What do you usually use them for?

**Ravi:** So yeah, I do use ChatGPT but it comes based on different uses, different cases. I can use it for a basic thing like making a decision regarding anything or anything bigger like either if you want to code something or it can be anything actually. I use it as a side source of information not as a primary reliable source.

**Interviewer:** Tell me about the last time you used AI for something important.

**Ravi:** Yesterday I was trying to make a decision, not a decision but how am I going to work things through regarding a work in my club. So I asked ChatGPT to give me a schedule or a plan to work with and I modified it in my own way.

**Interviewer:** When you get an answer from AI, do you usually trust it or do you check it?

**Ravi:** Checking in the sense, I obviously do not trust it blindly. I use it as a side resource of information but not as a primary thing. But if I have something like if I have, if there are some like anything significant then yeah, I obviously do check it in Google or something.

**Interviewer:** What's the biggest benefit you get from using AI?

**Ravi:** AI, it will personalize for you according to your experience and what you do and example if you prompt something earlier and when you come back to the same question again it will give you the same perspective which you wanted last time.

**Interviewer:** Do you have any concerns or worries while using AI?

**Ravi:** Not now but I am afraid how AI will dominate in the future.

**Interviewer:** Have you ever felt unsure if using AI in a situation was okay or not?

**Ravi:** When you are taking some sensitive personal decisions like you can't be asking AI to decide how your life.

**Interviewer:** How does using AI make things feel for you?

**Ravi:** It's obviously not confusing, it's not easier, it's just more convenient, that is about it.

**Interviewer:** If you couldn't use AI for a week, what would change for you?

**Ravi:** If not AI, I will just Google it man, if I want the statistical information. If not, I will just use my brain power. After all, we just made AI and we are using it for our own convenience.

**Interviewer:** How do you think AI will affect your work and studies in the future?

**Ravi:** Yeah, of course. Do you guys remember when you were in lockdown and there wasn't AI? We were reliant on websites called Brainly. Now we have AI which entirely like gives answers, describes things for you much more convenient way. So, it will affect my work. Sometimes it's positive or negative. Based on employment and work, basically AI does steal your jobs but it will give you much more different perspective jobs. Instead of doing the things which AI will do for you, you will be managing AI itself.

**Interviewer:** What would help you use AI more responsibly or confidently?

**Ravi:** Honestly, when you are prompting only, the AI itself should say how things should be working. Instead of we asking how to be ethical, it will only tell you how to chat or how to use itself ethically.

## 2. Jaspreet(22, MBA Student)

**Interviewer:** Do you use AI tools like ChatGPT or others? What do you usually use them for?

**Jaspreet:** Yeah, I use a few AI tools like ChatGPT, Elicit, Microsoft Copilot, and QuillBot. Mostly for research, writing, and sometimes presentations.

**Interviewer:** Tell me about the last time you used AI for something important.

**Jaspreet:** Recently, I used Elicit to find research papers, then ChatGPT to simplify the concepts, and Copilot to help with some data work. It made everything much faster and more organized.

**Interviewer:** How often?

**Jaspreet:** I'd say I use AI almost daily, especially for assignments. But I don't fully depend on it, I still try to go through everything myself.

**Interviewer:** When you get an answer from AI, do you usually trust it or do you check it?

**Jaspreet:** I usually double-check the answers with textbooks or reliable sources, because AI can get things wrong sometimes.

**Interviewer:** What's the biggest benefit you get from using AI?

**Jaspreet:** For me, the biggest benefit is saving time and improving the quality of my work.

**Interviewer:** Do you have any concerns or worries while using AI?

**Jaspreet:** I do worry about accuracy and also about becoming too dependent on it.

**Interviewer:** Have you ever felt unsure if using AI in a situation was okay or not?

**Jaspreet:** Yeah, sometimes I'm not sure where the line is, especially in academics. I think it's okay as long as I understand what I'm using and not just copying.

**Interviewer:** How does using AI make things feel for you?

**Jaspreet:** Overall, it makes things easier and less stressful, especially during deadlines.

**Interviewer:** If you couldn't use AI for a week, what would change for you?

**Jaspreet:** Without AI, I'd definitely spend a lot more time on research and rewriting.

**Interviewer:** How do you think AI will affect your work and studies in the future?

**Jaspreet:** I think AI is going to become a standard tool in most jobs, especially for analysis and decision-making.

**Interviewer:** What would help you use AI more responsibly or confidently?

**Jaspreet:** Clear guidelines from universities about what's allowed would really help make things less confusing.

# Aneesh

## 1. Aashna (19, Undergraduate Engineering Student)

**Interviewer:** So do you use AI tools like ChatGPT or others? What do you usually use them for in general?

**Aashna:** Yeah, I do use AI tools. I mostly use them for college work, like helping with assignments or verifying answers and things like that.

**Interviewer:** The last time you used AI, what was the most important thing you used it for?

**Aashna:** I don't really use AI for anything that important, but the last time I used it was for academic purposes. I was studying statistics and I used it to help with that. I'm not sure if that counts as important though.

**Interviewer:** How often do you use AI? Is it occasional or daily?

**Aashna:** Definitely not daily. I'd say occasionally, mostly during exam periods or when I have assignments. Otherwise, not really.

**Interviewer:** When you get answers from AI, do you usually check them or just trust them?

**Aashna:** I usually check them. I think AI can sometimes misunderstand what you're asking, and especially with mathematical stuff it's not always reliable. So yeah, I tend to verify most of the time.

**Interviewer:** What's the biggest benefit you think of using AI personally?

**Aashna:** I think it saves a lot of time. Also, sometimes your questions are very specific, and you might not find direct answers on Google or other search engines. AI can help with that, but you still have to be careful.

**Interviewer:** Do you have any concerns or worries about using AI?

**Aashna:** Yeah, mainly the fact that it's not always trustworthy. Also, I see a lot of people relying on AI for everything these days. It does have the tendency to make up information sometimes just to sound convincing, so you shouldn't blindly trust it.

**Interviewer:** If you couldn't use AI for a week, how would that affect your daily tasks?

**Aashna:** Honestly, it wouldn't affect me that much. I actually think it might be a net positive. I feel like we've kind of lost the habit of using our own thinking for even simple things. Not using AI for a week might bring some of that back.

**Interviewer:** How do you think AI will affect your work or studies in the future?

**Aashna:** For studies, I think it'll be helpful as long as you use it as a tool and not rely on it completely. For work, I think it'll definitely be an improvement. It'll make people more productive overall.

**Interviewer:** What would help you use AI more responsibly or confidently?

**Aashna:** I think the main thing is not blindly trusting it. Just having some doubt and verifying things when needed. That's probably the most responsible way to use it.

**Interviewer:** How does using AI make things feel for you?

**Aashna:** Definitely easier. It makes things a lot simpler. I don't have to put as much effort into things that it can handle, so overall it just makes life easier.

---

## **2. Joel Xavier (19, Commerce Student)**

**Interviewer:** Do you use AI tools like ChatGPT or others? What do you usually use them for?

**Joel:** Yeah, I do use AI, mostly ChatGPT. It's mainly for studying, like if something doesn't make sense I'll just ask it to explain. Sometimes I use it for assignments too, like to make things sound better or just get a basic idea.

**Interviewer:** Can you tell me about the last time you used AI for something important?

**Joel:** Recently I had an assignment and I didn't really know how to start, so I used AI to get a rough structure. It didn't do the work for me, but it helped me figure out what direction to go in.

**Interviewer:** How often do you end up using AI?

**Joel:** Probably almost every day, but not in a serious way all the time. Just whenever I need help with something.

**Interviewer:** When you get an answer from AI, do you usually trust it or check it?

**Joel:** I usually check it, especially if it's something important, because it can sound confident even when it's not fully correct.

**Interviewer:** What's the biggest benefit you personally get from using AI?

**Joel:** Saving time, honestly. It's way faster than searching everything yourself.

**Interviewer:** Do you have any concerns or worries when using AI?

**Joel:** Yeah, mainly accuracy and also relying on it too much.

**Interviewer:** If you couldn't use AI for a week, what would change for you?

**Joel:** Things would take more time. I'd have to search more and think through things myself.

**Interviewer:** How do you think AI will affect your work or studies in the future?

**Joel:** I think it'll help a lot, but people still need to understand what they're doing and not depend on it completely.

**Interviewer:** What would help you use AI more responsibly?

**Joel:** Clearer rules about what's okay and what's not.

**Interviewer:** How does using AI feel for you?

**Joel:** Easier, but sometimes a bit overwhelming.

---

### 3. Nitin (19, Undergraduate Engineering Student)

**Interviewer:** Do you use AI tools like ChatGPT or others? What do you use them for?

**Nitin:** Yes, I use AI tools primarily for academic purposes, such as understanding concepts, verifying answers, and structuring assignments.

**Interviewer:** The last time you used AI, what was it for?

**Nitin:** While preparing for an exam, I used it to clarify a topic and break it down into simpler parts.

**Interviewer:** How often do you use AI?

**Nitin:** Fairly regularly during academic workload, though not daily.

**Interviewer:** Do you trust AI outputs?

**Nitin:** Not entirely. I verify important information.

**Interviewer:** What's the biggest benefit?

**Nitin:** Efficiency. It reduces the time needed to understand information.

**Interviewer:** Any concerns?

**Nitin:** Reliability and the risk of over-dependence.

**Interviewer:** If you couldn't use AI for a week?

**Nitin:** It would slow things down but improve independent thinking.

**Interviewer:** How do you think AI will affect your work or studies in the future?

**Nitin:** It will enhance productivity but requires responsible usage.

**Interviewer:** What would help you use AI more responsibly?

**Nitin:** Verifying information and using it as a support tool.

**Interviewer:** How does using AI feel?

**Nitin:** Efficient, but requires caution.

---

### 4. Ayesha (18, 12th Grade Student)

**Interviewer:** Do you use AI tools like ChatGPT? What for?

**Ayesha:** Yeah, mostly for studying or when I need something explained differently. Sometimes I also use it to double-check things.

**Interviewer:** Last time you used it?

**Ayesha:** While preparing for a test, I used it to understand a concept better.

**Interviewer:** How often do you use AI?

**Ayesha:** A few times a week, depending on workload.

**Interviewer:** Do you trust it?

**Ayesha:** Not completely. I usually cross-check.

**Interviewer:** Biggest benefit?

**Ayesha:** Convenience, you get direct answers quickly.

**Interviewer:** Any concerns?

**Ayesha:** Accuracy and over-dependence and also hallucination.

**Interviewer:** If you couldn't use AI for a week?

**Ayesha:** I'd manage, but things would take longer.

**Interviewer:** How do you think AI will affect your work or studies in the future?

**Ayesha:** It'll be very helpful if used responsibly.

**Interviewer:** What would help you use AI more responsibly?

**Ayesha:** Using it as a tool, not as a shortcut to get stuff done.

**Interviewer:** How does it feel using AI?

**Ayesha:** Easier, sometimes a bit overwhelming because you have to give proper prompts.

---

## 5. Rohan (32, Software Engineer)

**Interviewer:** Do you use AI tools like ChatGPT or others? What do you use them for?

**Rohan:** Mostly for debugging, understanding concepts, and exploring different approaches to problems.

**Interviewer:** The last time you used AI?

**Rohan:** While debugging a coding issue related to edge cases.

**Interviewer:** How often do you use AI?

**Rohan:** Quite frequently, especially while coding.

**Interviewer:** Do you trust AI answers?

**Rohan:** I verify them, especially for correctness and efficiency.

**Interviewer:** What's the biggest benefit?

**Rohan:** It reduces friction and speeds up problem-solving.

**Interviewer:** Any concerns?

**Rohan:** Over-reliance and misleading explanations.

**Interviewer:** If you couldn't use AI for a week?

**Rohan:** Slower progress but deeper thinking.

**Interviewer:** How do you think AI will affect your work or studies in the future?

**Rohan:** It will become a standard productivity tool.

**Interviewer:** What would help you use AI more responsibly?

**Rohan:** Understanding its limitations and verifying outputs.

**Interviewer:** How does using AI feel?

**Rohan:** Efficient, like having a thinking partner.
